

## **Project of the Year 2006**

### **CTA Bus Tracker**

Bus Tracker was developed by the Chicago Transit Authority to improve bus operations and provide better service to our customers. Bus Tracker uses GPS to track bus locations. Patented prediction algorithms and historical information enables the Bus Tracker system to provide CTA with current locations of buses and users (end-customers) with the ability to view when the bus will arrive at their desired bus stop location. CTA launched the Bus Tracker pilot on buses and one bus shelter along the high demand #20 Madison bus route operating on Madison and Washington between the Loop and Austin Avenue. Access to this information is through the Internet or via a wireless mobile devices.
